

Tips to Streamline the Funding Process

- Communicate upfront so the family and physician are aware of the opportunity. Provide the family with the parent and caregiver resource and the physician resource included in the toolkit.
- Include your client or student's insurance information up front to expedite the funding process.
- Rely on consequence-free decision making with the opportunity to swap app and device size later.
- Use the data you already have to bypass the need for a trial device from AbleNet.
- Utilize AbleNet's Speech Evaluation Template to Save You Time!

How does it work?

1

Identify all Individuals Who Could Benefit from AAC

With the ability to choose any speech app, the QuickTalker Freestyle can work for individuals using no tech, low tech, mid tech, and high tech AAC.

2

Submit a Benefit Check

A benefit check is a form you complete to verify medical insurance coverage before you spend the time showing it to the family, trialing it with the client, or writing the speech evaluation.

3

AbleNet Handles all the Communication

We contact the doctor for the prescription, the family for the insurance cards, and handle all communication with the insurer.

4

You write the Speech Evaluation

All we ask the SLP to do is write the speech evaluation. And we even provide an easy-to-use template to help!

5

Your Client or Student Receives their QuickTalker Freestyle

And is supported by our ableCARE program throughout the duration of the 5-year warranty to ensure they meet their maximum potential!

*Average time calculated using individuals who started and completed the funding process in the past 90-days.
